

A modern office interior with large windows overlooking a city skyline. A woman in a blue suit is holding a tablet and talking to a man in a light blue shirt. The room features a long white table, black chairs, and a wooden floor. A large, stylized graphic of a city skyline is overlaid on the right side of the image.

Title: **Releases Notes Omnia 4.2**

1 About this document

1.1 Purpose of this document

This document describes the release notes for the following software:

- **Product:** Omnia
- **SW Versions:** 4.2

1.2 Intended Audience

This document is intended to be used for distribution.

2 Software Release Description

The following software releases are described respectively by:

- Releases 4.2 – New Features/Enhancements
 - Omnia Common Function
 - Omnia Vertical Domains / Application fields
 - Administrator/Supervisor functions
- Releases 4.2 – Fixed

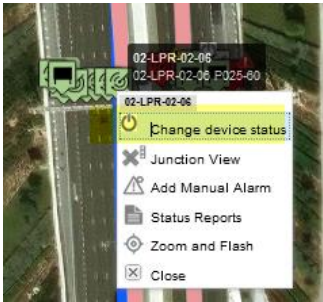

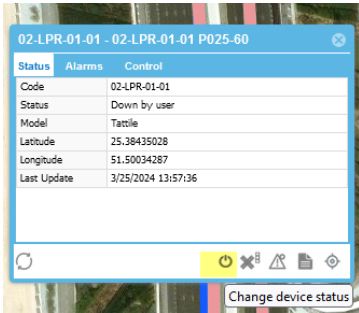

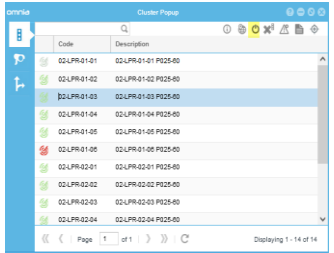

3 Release Notes Omnia 4.2

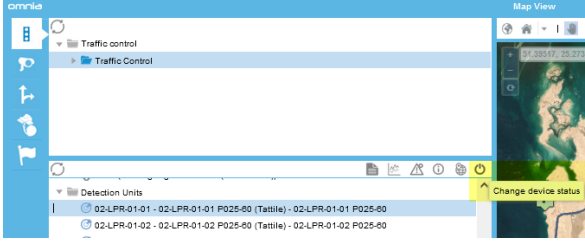

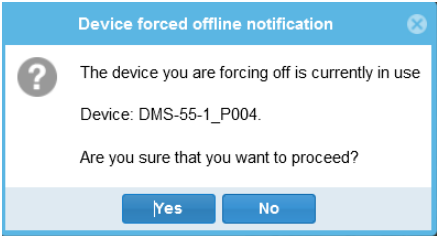

3.1 New Features/Enhancements

The following new or enhanced features are available Omnia release 4.2

3.1.1 Omnia Common Function

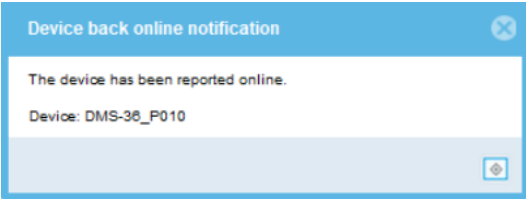

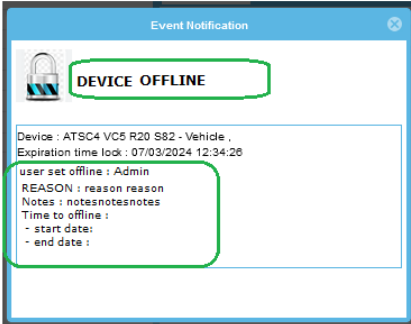

Here below the list of “common” features (new or enhanced) released in Omnia 4.2 version.

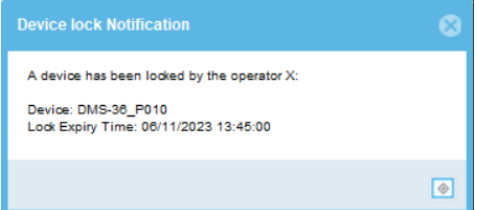

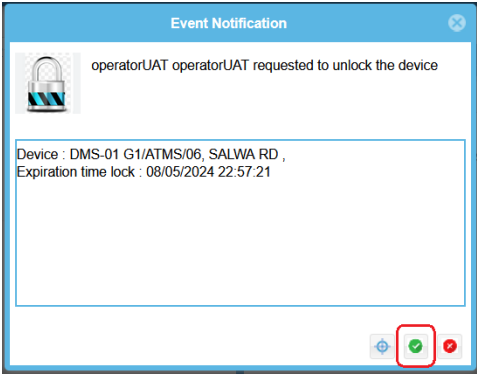

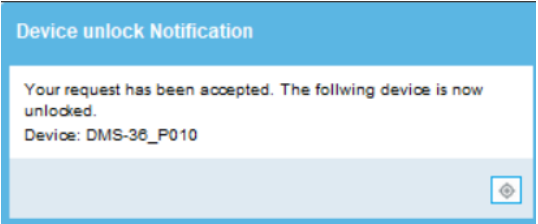

Domain (Common)	Feature
Map View	<p>New:</p> <p>(Change device status – Online/Offline) – In Map View application, the user is provided with the “Change Device Status” command for changing device status (online/offline). This is possible for the following devices: TLC, Detection Units, and Electronic Signs. The command is present, as usual, in the following:</p> <ul style="list-style-type: none"> - Device status popup - Device icon map context menu - Device object tree toolbar - Map Clusters popup toolbar <div style="display: flex; justify-content: space-around;">    </div>

Domain (Common)	Feature
	
Map View	<p>New:</p> <p>(Force device Offline) – It is possible for a user with appropriate role and permission to force device status Offline in Map View application (this is valid for DMS, TLC and DU), by clicking the “Change device status” action button associated at a specific device.</p> <p>A notification popup will ask for confirmation about forcing off a device currently in use:</p>  <p>By confirming, it is necessary to proceed by specifying the date/time (from which time the offline status starts), the duration for “offline” status and the reason for which device is put offline.</p> <p>The reason can be selected from a list of standard items or by entering free-form text as last resort and reason value will be used for system reporting scope.</p> <p>This popup is common for DMS, TLC and DU devices.</p>

Domain (Common)	Feature
	<div><div><div><div>Forced offline : DMS-03-1_P023C2</div><div><div>From</div><div>2024-05-21</div><div>16:51</div></div><div><div>To</div><div>2024-05-21</div><div>16:51</div></div><div><div>Reason:</div><div>Select</div><div>Other (please specify)</div><div>Device not yet commissioned</div><div>Device under maintenance</div></div><div><div>Note:</div><div></div></div><div><div>Save</div><div>Cancel</div></div></div></div><div><p>The system will confirm the operation with a popup:</p><div><div>Force offline</div><div><div>!</div><div>The device status has been forced offline</div></div><div><div>Ok</div></div></div><div><p>In map view the device is represented by a new grey icon, reflecting the “Down by User” status; the device status popup will report the new status:</p><div><div></div><div><div>508 - DMS-55-1_P004</div><div><div>Status</div><div>Alarms</div><div>Control</div></div><div><div>Code</div><div>508</div></div><div><div>Message</div><div><div></div><div>اربط حزام الأمان</div><div>FASTEN YOUR SEAT BELT</div></div></div><div><div>Status</div><div>DOWN BY USER</div></div><div><div>Source</div><div>External</div></div></div></div></div></div></div>
Map View	<div><p>New:</p><p>(Bring back device online) - It is possible for a user with appropriate role and permission to bring back the device status online in Map View application (this is valid for DMS, TLC and DU), by clicking on “Change device status” action button.</p><p>The following notification popup comes when the “Change device status” button is clicked for a device in the offline status”:</p><div><div><div>2 - DMS-01 G1/ATMS/06, SALWA RD</div><div><div>Status</div><div>Alarms</div><div>Control</div></div><div><div>Code</div><div>2</div></div><div><div>Message</div><div><div></div><div>لا تستخدم الجوال</div><div>اثناء القيادة</div></div></div><div><div>Are you sure you want to change this device : DMS-01 G1/ATMS/06, SALWA RD status to online?</div><div><div>Yes</div><div>No</div></div></div></div></div><div><p>Please note that the operator can modify the status if the “forced offline” status was decided by an equivalent/lower user in permissions and role; if the device has been forced offline by a Supervisor, the operator is not allowed to bring back the device online.</p></div></div>

Domain (Common)	Feature
	When “bring back online” option is saved, the device comes back online, starting again to receive measures and diagnostic by adapters.
Map View	<p>New:</p> <p>(Extend forced offline period) - It is possible for a user with appropriate role and permission to extend the device forced offline status period - for a device already offline - in Map View application. In case of extending duration, the expiry time relating to the forced period is changed accordingly in the system.</p>
Map View	<p>New:</p> <p>(Display Impact Area) - The event impact area is defined as the area close to an event where the traffic is impacted by the presence of the event itself.</p> <p>The event impact area is calculated for the current traffic situation, forecast +15, +30, +45 and +60 minutes.</p> <p>The operator is able to display the event impact area on request by clicking on a button on the event pop-up.</p> <p>The operator is able to change the displayed event impact area forecast on request, by selecting the forecast from a contextual menu on the map.</p> <div data-bbox="681 1102 1136 1514" data-label="Image"> </div> <p>The Event impact bar allows the user to:</p> <ol style="list-style-type: none"> change the radius of search of arcs (1000 m – 4000 m – Radius area) <div data-bbox="456 1626 1362 1814" data-label="Image"> </div> <ol style="list-style-type: none"> make a sort of playback of the impact, changing every 5 seconds the layer changing the step_index parameter, from 15min to 60min. <p>The list of impacted arcs are drawn on the map using a layer on Geoserver</p>

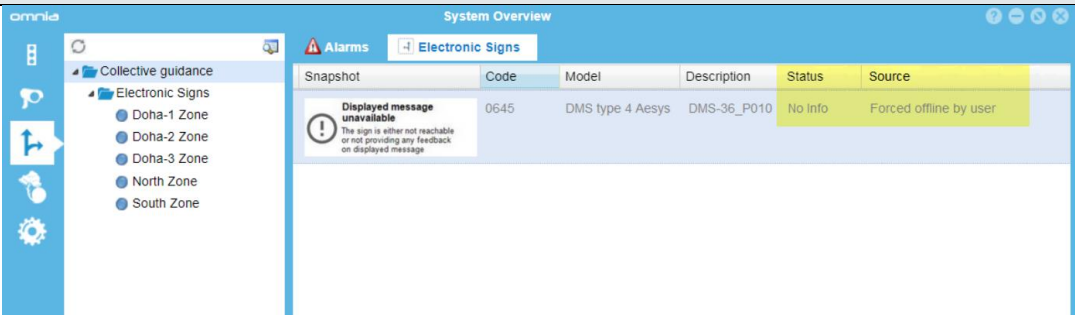

Domain (Common)	Feature
	<div data-bbox="564 315 722 427"> <ul style="list-style-type: none"> > 0.9 GREEN > 0.7 - 0.9 YELLOW > 0.5 - 0.7 AMBER < 0.5 RED </div>  <p>Events come from QPRO and WAZE external systems ,from AID cameras/algorithm to RMC-SS system or by the operator directly, providing geographic and areas information (affected corridor arcs).</p>
Notification	<p>New:</p> <p>(Notification when device comes back online) - The user is notified with a popup when a device that before was offline, comes back online; the system will notify all the users in the recipient list (properly configured in the Notification Configurator application) about the new status of the device.</p> 
Notification	<p>New:</p> <p>(Notification for device forced offline) - All users (properly configured in the notification recipient list configuration) will be informed when a device is forced offline for several reasons.</p> <p>In the notification are specified the following:</p> <ul style="list-style-type: none"> - The operator identity, responsible for the forcing offline operation - The device identification code - Expiring time for “forced offline” status - Operation reasons 

Domain (Common)	Feature
	<p>Popup can be configurated (in Notification Configurator tool) in order to easily locate on the map using the proper action button.</p>
Notification	<p>New:</p> <p>(General) - Any Notification or change in the notification status is logged and stored into the DB. Historical data are used to reproduce Performance Report and Notification Report.</p> <p>Stored notifications are linked to the operator performed the action (consequently change in the status), the template, the type and subtype and any other fields reported into Notification template.</p> <p>Escalation, Reminder and Acknowledgment are included.</p> <p>Every logged data refers to a specific Timestamp.</p>
Notification	<p>New:</p> <p>(Lock notification) - Every user properly configured in the notification template recipients list, is notified when a system device (TLC-Electronic Signs) has been locked by the specific user.</p> 
Notification	<p>New:</p> <p>(Electronic Sign/TLC unlock notifications) – In case the user who is trying to unlock the device is different from who locked it previously, but has the same role ad permissions→a notification is received by the user who is locking the device at that moment, asking for permission to unlock the device.</p> <p>The user owner of the lock can reject or accept (by clicking the red or the green buttons) the request to unlock, and the following notification are displayed to the request sender:</p> <div style="display: flex; align-items: center;">  <div style="margin: 0 20px;">→</div>  </div> <p>This is the notification received by the owner of the lock: he accepts to unlock the device.</p> <p>The device is unlocked, and the asking user informed with this accepting notification</p>

Domain (Common)	Feature
	<div><div><div><div><div>Event Notification</div><div>operatorUAT operatorUAT requested to unlock the device</div><div>Device : DMS-01 G1/ATMS/06, SALWA RD , Expiration time lock : 08/05/2024 22:57:21</div><div></div></div></div></div><div>→</div><div><div><div><div>Event Notification</div><div>Unlock request rejected</div><div>User Device : DMS-01 G1/ATMS/06, SALWA RD , Expiration Time : 08/05/2024 22:57:06</div><div>Note: notes reject notes reject notes reject notes reject notes reject notes reject notes reject notes reject notes reject notes reject</div></div></div></div><div><p>This is the notification received by the owner of the lock: he rejects to unlock the device.</p><p>In this case the next popup will ask to enter the rejection reasons:</p><div><div><div><div>Event Notification</div><div>Reason of Reject</div><div>Note: <div></div></div><div><div>Save</div><div>Cancel</div></div></div></div></div><div><p>The notification popup received by the user owner of the lock includes a link that allows to center on the map the device affected by the request. </p></div></div></div>
Notification	<div><p>New:</p><p>(Duplicated events are found) - In particular cases, a notification popup can be configured in Notification Configurator application to inform the user when possible duplicated events are found in the system, in a radius of about 1 km.</p><div><div><div><div>Event Merge Notification</div><div>Possible duplicate events found</div><div>Doha Zone 1 - Accident - 1003 - National Theatre EVT:638325514843571092 Doha Zone 1 - Accident - 1003 - National Theatre EVT:514325514843571093</div><div></div></div></div></div><div><p>From the Notification popup, the user will be able to read event details text description and code, open Merge panel and locate events on the map.</p></div></div>

Domain (Common)	Feature
Notification	<p>New:</p> <p>(Notification Priority) – From this software release, notification have a priority; according to the notification priority, the corresponding behaviour of notification is different.</p> <p>A balloon remains in the Notification Widget panel if priority is low.</p> <p>Depending on the priority, the popup can be minimized, closed or the User must do an action (High priority):</p> <ul style="list-style-type: none"> ▪ Low priority notification includes basic information and can be closed by the user. ▪ Medium priority notification identifies task or action to perform, but not critical; can be iconized and doesn't freeze the screen; the user can perform actions. ▪ High priority notification identifies task or action mandatory; Notification cannot be closed or reduced and the screen will be freeze until the user perform the action <p>The "Name" of the notification must be unique; when saving the notification, if a duplicate NAME is entered, saving must be blocked with the message: "NAME exists, change NAME to proceed with saving the Template."</p>
Notification	<p>New:</p> <p>(Event notification popup) - The Event notification popup is displayed in the middle of the screen to notify the user about:</p> <ul style="list-style-type: none"> ▪ New Events: Omnia user can be notified when an event is created (if the corresponding template is created into the system and is properly configured in Notification Configurator application). ▪ Updated Planned Events: it is possible – for the operator – to receive a notification when the Event's planned "end time" is expired but the event persists opened: <div data-bbox="691 1467 1120 1751" data-label="Image"> </div> <p>Note that when scheduled events expired, but result still opened, a notification is sent to the user and the event icon on the map is updated: the hourglass icon colour changes from blue to red. For Planned events that are in the future, a blue hourglass is displayed.</p>

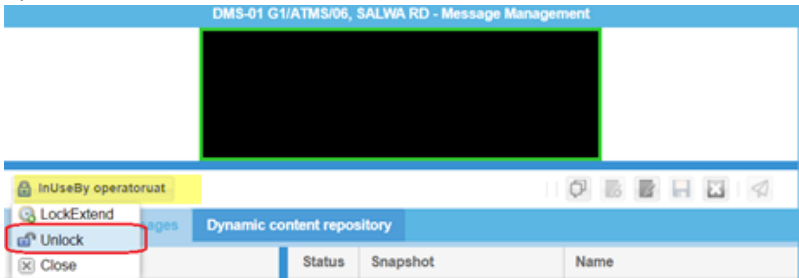

Domain (Common)	Feature
	<div data-bbox="836 264 995 409" data-label="Image"> </div> <ul style="list-style-type: none"> Updated Standards Events: Omnia user can be notified when an event is updated (if the corresponding template is created into the system and is properly configured in Notification Configurator application). <p>Event Notification includes the following information:</p> <ul style="list-style-type: none"> Event area Event code Source of the event Event description Event details Incident Time End time Additional Information <ul style="list-style-type: none"> The event can be zoomed on the map using proper action button. Event details can be opened in the Event Panel using proper action button. <div data-bbox="379 1048 900 1442" data-label="Image"> </div> <div data-bbox="932 1048 1437 1442" data-label="Image"> </div>
<p>System Overview</p> <p>Map View</p> <p>Status Report</p>	<p>New:</p> <p>(Status="NO INFO" +Source field) - The field "Source" in System Overview, Map View and Status Report applications specifies the reason for the status "NO INFO" (i.e Forced offline by user).</p>

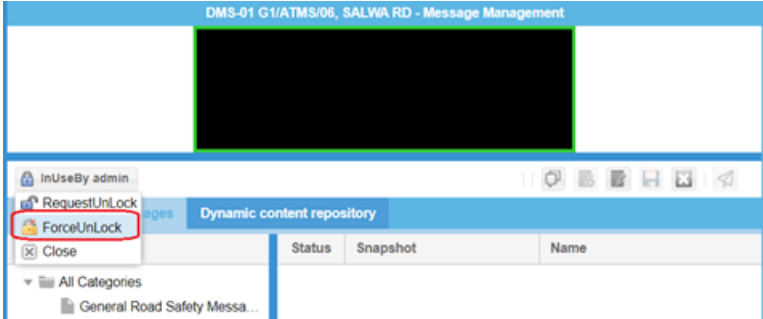

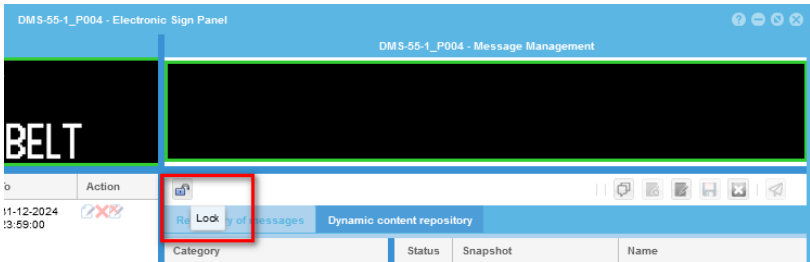

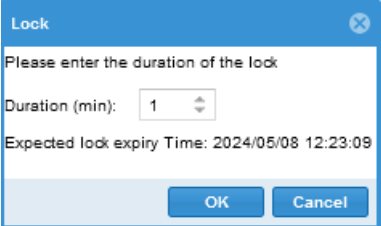

Domain (Common)	Feature
	 <p>This status is reflected in the system with a complete stop of the communication between Omnia and the device: measures/diagnostic are not received during this status duration. On the map, the corresponding device icon is grey (like “No Info Status”) + little icon to indicate is forced offline by the user.</p> 

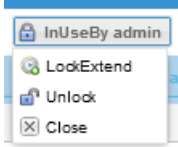

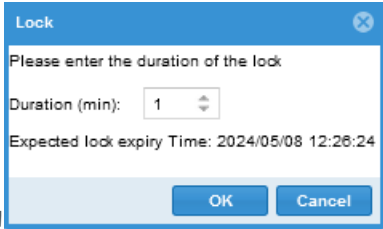

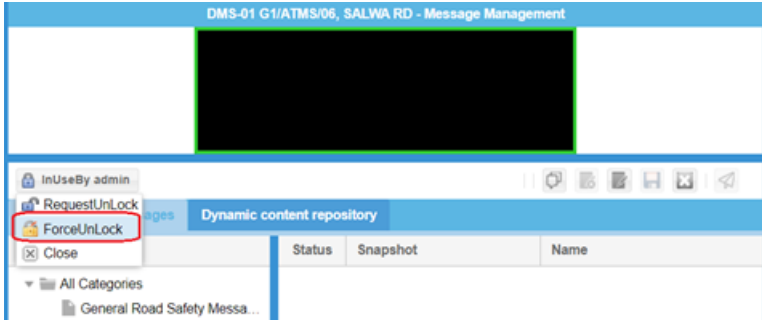

3.1.2 Omnia Vertical Domains/Application fields

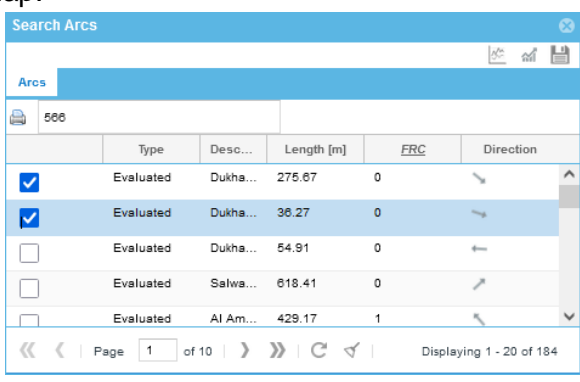

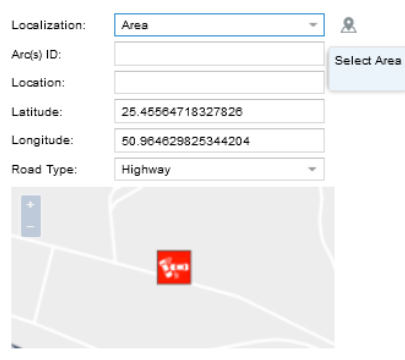

For a better comprehension have been defined “vertical domains” (*Collective Guidance, TLC, Video Surveillance, Environment Monitoring, etc...*) and other application domains (*Traffic Management, Event Management, Data Collection and Monitoring, Traffic Monitoring, Strategy Development, Emergency management, Faults Management, etc...*) that allow the reader to customize the personal use of this document.

Here below the list of features (new or enhanced) released in Omnia 4.2 version, ordered by domains, which can be included or not in the proper customized system solution.

Domain	Feature
Collective Guidance – Traffic Light Controller	<p>New:</p> <p>(Electronic Sign unlock) - The user can “Unlock” the device that has been previously locked, by clicking on the lock button in the Electronic Sign Panel toolbar (labelled with the lock owner operator’s name):</p>  <p>The system behaviour is different in the following cases:</p>

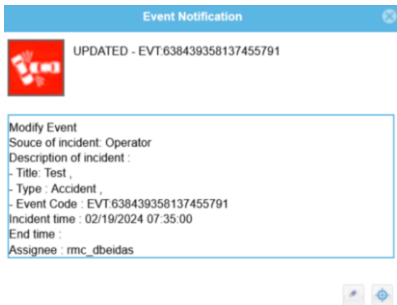

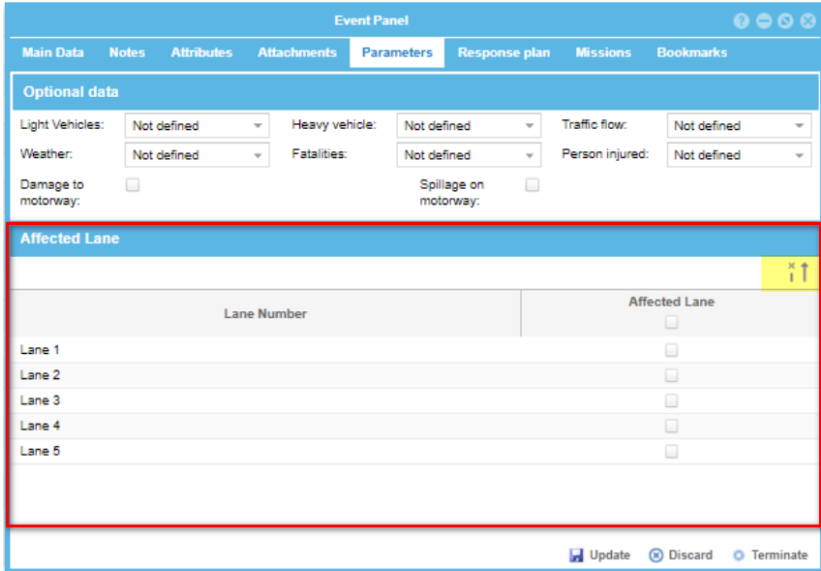

Domain	Feature
	<p>1) The user who is trying to unlock the device is the same who locked it previously→ in this case, by choosing “Unlock” context menu option, the device is immediately unlocked.</p> <p>2) The user who is trying to unlock the device is different from who locked it previously but has the same role ad permissions→a notification is received by the user who is locking the device at that moment, asking for permission to unlock the device.</p> <p>→At this point, the user owner of the lock can reject or accept the request to unlock and the user asking the unlock operation is notified about the answer and the device lock status will change accordingly.</p> <p>3) The user who is trying to unlock the device is different from who locked it previously, and he is Administrator/Supervisor→a popup is displayed providing the „force unlocking“ option (see next feature description):</p>  <p>If the Supervisor/Administrator selects this option, the device is unlocked, and the operator owner of the lock is notified that a Supervisor has forced the unlocking of the device.</p>
Collective Guidance – Traffic Light Controller	<p>New:</p> <p>(Electronic Sign lock) - User can lock an Electronic Sign for exclusive access from Electronic Sign Panel application, by clicking on padlock action button:</p>  <p>A popup is displayed to Enter the duration of the lock:</p> 

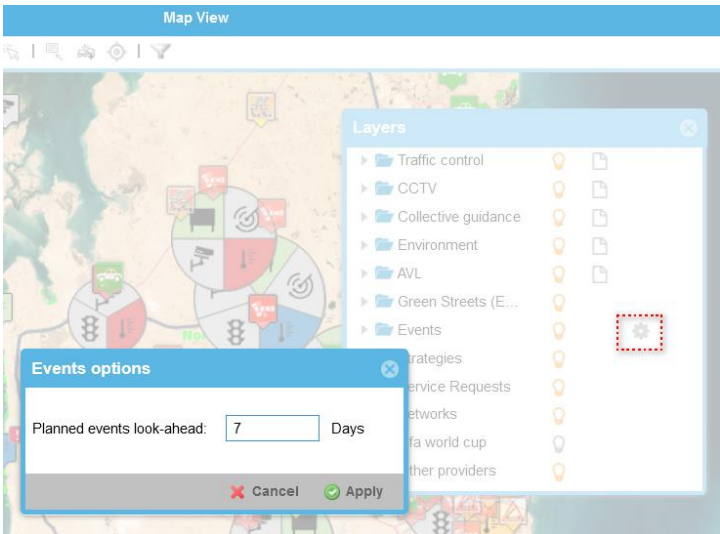

Domain	Feature
	After the duration period the lock expires automatically if not extended.
Collective Guidance – Traffic Light Controller	<p>New:</p> <p>(Electronic Sign extend lock period) - It possible (for the lock owner only) to extend the locking period from Electronic Sign Panel application, by clicking on padlock image that is displaying the name of the lock's owner:</p>  <p>The system provides the following popup to specify extension period parameters and After the duration period the lock expires automatically</p> 
Collective Guidance – Traffic Light Controller	<p>New:</p> <p>(Electronic Sign - Forcing unlock) – Administrator/Supervisor only can forcing device unlock, by clicking on the lock action button available in the Electronic Sign Panel.</p>  <p>By selecting this option, the device is unlocked and the operator owner of the lock is notified that a Supervisor has forced the unlocking of the device.</p>
Event Management	<p>Enhancement:</p> <p>(Event Panel - Event localization field) – In the Event Panel, already existing "localization" field user experience have been improved, relating the first two options: "On Arcs" and "At Geographical coordinates".</p>

Domain	Feature
	<p>Localization: On an Arcs </p> <p>Arc(s) ID: On an Arcs</p> <p>Area(s): At geographic coordinates</p> <p>Area Select the road</p> <p>When the “Select road” button  is clicked, the application displays a popup that provides the arcs list (plus a search field) that allow the user to select multiple arcs to better define the event position on the map.</p>  <p>The zoom level is limited to the highest 3 ones, the list of arcs affected is displayed to the operator for review and the event panel is moved to the top right corner, in order to allow operator to see the map. When selecting/unselecting the arcs from the list, the highlighted arcs are displayed on the map.</p> <p>When arc selection is confirmed in the popup (by clicking on “save button”), the tile of the map displays exactly the geographical location. Event’s coordinates are displayed in the form and the user is able to change them from map only, moving the event icon in the specific position.</p>
Event Management	<p>New:</p> <p>(Event Panel - Event localization field) – In the Event Panel, has been added a third option that allows the user to create graphically the area to associate to the event:</p>  <p>The map opens in "edit mode" and the user can choose different pre-defined area (Regular Shape, Draw Polygon, Draw Circle).</p>

Domain	Feature
	 <p>The user can edit area for all events except those generated by QPRO and WAZE.</p> <p>The user can:</p> <ul style="list-style-type: none"> ○ resize the area ○ change the area type ○ recreate the area ○ change the Localization type (from "on an area" to "on an arc" or "on coordinates") 
Event Management	<p>Enhancement:</p> <p>(Insert Merge Events) - The Event Overview application has been improved adding the event properties merging panel. The user that is monitoring the Events status can merge two events of the same type to manage more easily only one event represented by the events selected.</p> <p>Selecting from the Event Overview panel the records corresponding to the events to merge (it is mandatory that events belongs to the same type) and clicking on "Merge Event" button → the Merge Events panel opens and allows the user to compare and select which event's property to be merged from Event A and Event B and save the resulting event.</p>

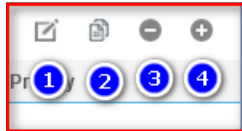

Domain	Feature
	<div data-bbox="486 241 1342 963"> </div> <p>The new event is created and located on the map; the single events existing before the merge operation disappear from the "Event Overview" list; they are displayed in Event Report application as "cancelled".</p> <p>Resulting merged event is notified into the system like below; has the properties selected by the user during the merge and can be displayed in Event Overview application.</p> <div data-bbox="727 1158 1102 1444"> </div> <p>Please note that NO external events (generate db by the system) can be merged.</p>
Event Management	<p>New:</p> <p>(Event Panel – event assignee updating) – When the event assignee is updated in the Event Panel application, a proper notification popup is displayed.</p>

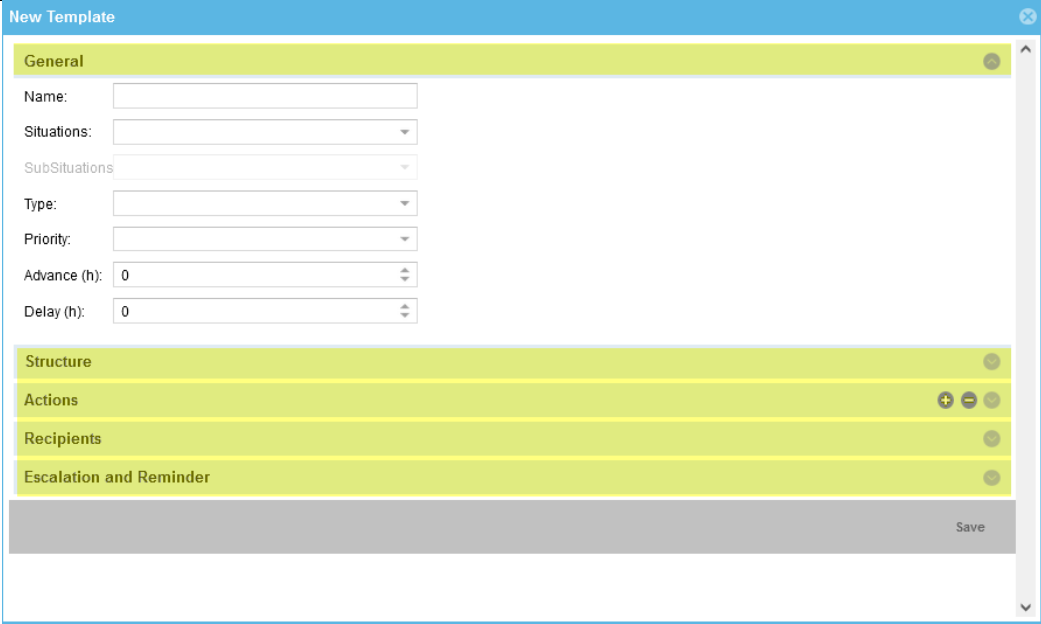

Domain	Feature
	
Event Management	<p>Enhancement:</p> <p>(Event Panel – Parameter tab) - In the Event Panel, the Parameters tab has been restyled in order to allow the user to easily access to Incident management tool and manage properly the lanes involved in the incident. The “Affected Lane” section has been provided with the “Incident Management Tool” action button that open the corresponding application and the lanes check list.</p> 
Event Management	<p>New:</p> <p>The operator will be able to configure the look-ahead period for Planned events in Map View application.</p> <p>By clicking on the  icon beside to Events folder the user can enter how many days in the future he wants to see the events on the map.</p>

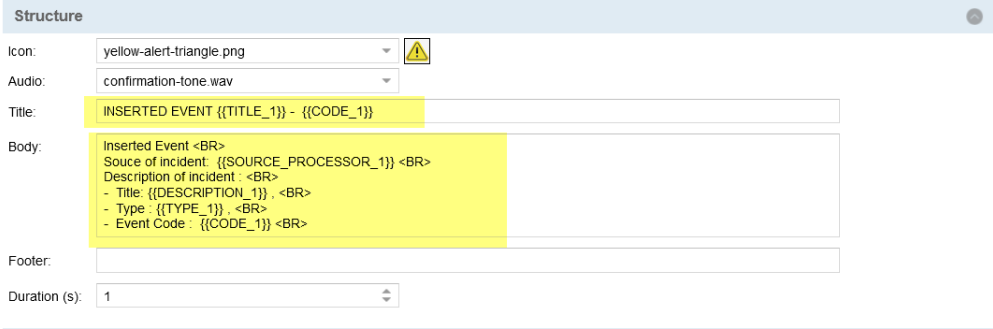

Domain	Feature
	

3.1.3 Administrator/Supervisor Functions

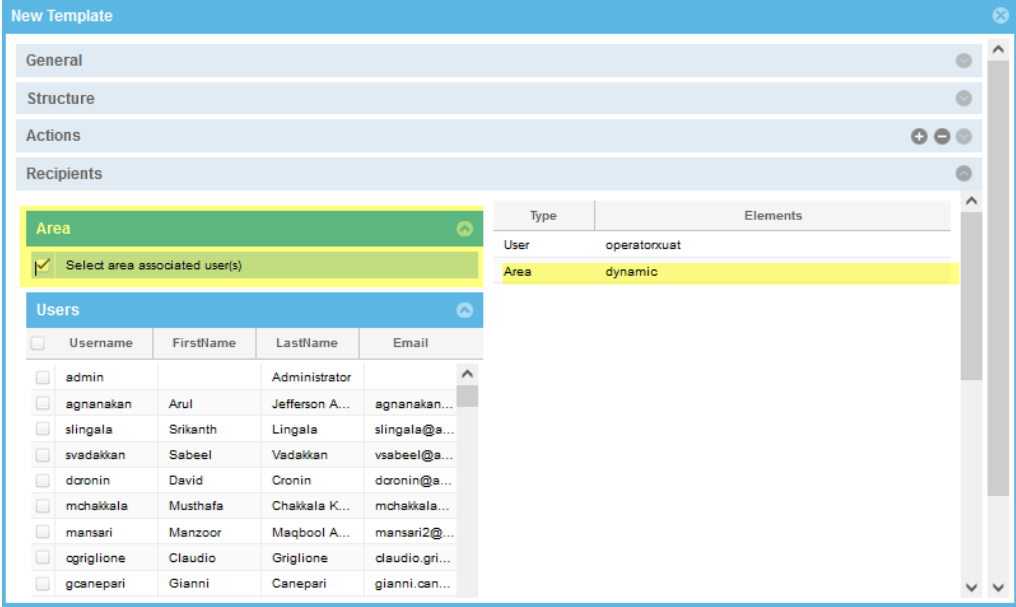

Feature related to Administrator user only that have been released in this Omnia 4.2 version.

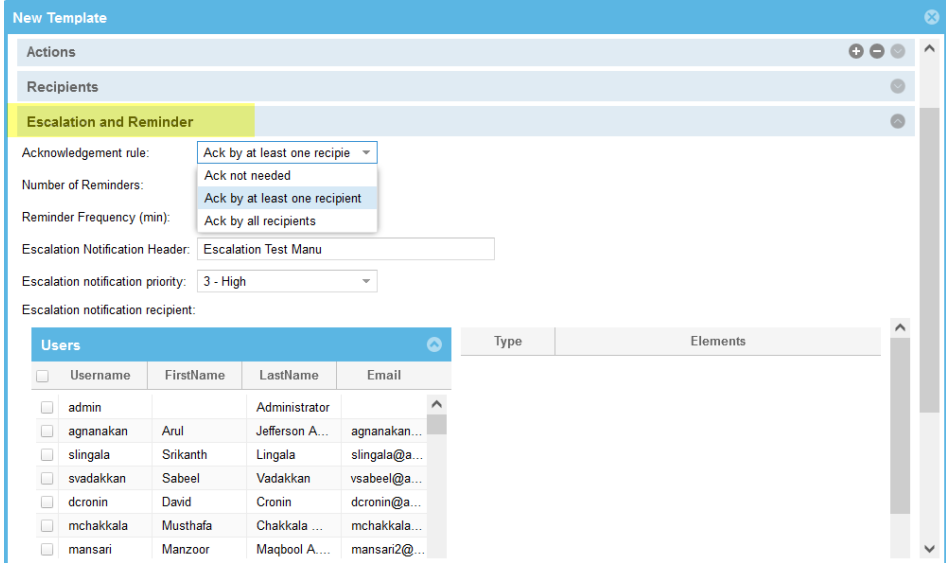

Domain	Feature
Notification Configurator	<p>New:</p> <p>(New application) – The new Notification Configurator application – available in the main menu - provides the possibility to configure customized notifications for different types of situations and sub situations. Starting from a generic notification template, it can be customized in terms of structure, rules, priority, actions required, recipients, etc...</p> <p>Notification Configurator main panel displays data related to all notification templates available into the system.</p> <p>Information in Notification Configurator is presented in a grid form.</p> <p>Notification Configurator application provides the user with the following features:</p> <ol style="list-style-type: none"> 1) Edit Template 2) Clone Template 3) Delete Template 4) Add new template  <p>Each record represents a notification template that is composed by the following sections:</p>

Domain	Feature
	 <p>Stored data (i.e user identity + timestamp) will be used to feed “Notification report” and “Performance Reports” to measure performance of the operators and notification process (time between start-acknowledgment, change of status and others).</p>
Notification Configurator	<p>New:</p> <p>(New application) – For the user that is configuring a new system notification with Notification Configurator tool, in the „General“ section the user can configure the following notification parameters:</p> <ul style="list-style-type: none"> ■ Name ■ Situations (Event/Device Control/Fault Monitoring Module/Strategy Module...) ■ Sub Situations (New Event/Planned Events/Change Assignee/...) ■ Type (GUI/Mail/SMS) ■ Priority (Low/Medium/High) <p>A couple of optional parameters are used in special cases:</p> <ul style="list-style-type: none"> ■ Advance (hours) ■ Delay (hours) <p>They can be used in the case of a planned event (i.e. work on the road), to notify the operators time before the event starts (for example 2 days before) to allow them to prepare what the event needs; another notification can be sent to notify the possible delay after the expected end of the event (for example one day), to allow the operator to check if that event is really over or is still there on the street.</p>
Notification Configurator	<p>New:</p> <p>(New application) – For the user that is configuring a new system notification with Notification Configurator tool, in the „Structure“ section it is possible to configure the following notification parameters:</p>

Domain	Feature
	<ul style="list-style-type: none"> Icon (png) Audio (Wav) Title(parametric/HTML) Body (parametric/HTML; refer to Administrator for specific document containing syntax rules) Footer Duration(s)  <p>The screenshot shows a configuration interface with the following fields:</p> <ul style="list-style-type: none"> Icon: A dropdown menu showing 'yellow-alert-triangle.png' with a warning icon. Audio: A dropdown menu showing 'confirmation-tone.wav'. Title: A text field containing 'INSERTED EVENT {{TITLE_1}} - {{CODE_1}}'. Body: A text area containing a parametric HTML template: <pre> Inserted Event
 Source of incident: {{SOURCE_PROCESSOR_1}}
 Description of incident :
 - Title: {{DESCRIPTION_1}} ,
 - Type : {{TYPE_1}} ,
 - Event Code : {{CODE_1}}
 </pre> Footer: An empty text field. Duration (s): A dropdown menu showing '1'.
Notification Configurator	<p>New:</p> <p>(New application) – For the user that is configuring a new system notification with Notification Configurator tool, in the "Action" section, the user can configure the "Action Name" field, choosing between some options (i.e. Insert the action button to open Events details, Insert the action button to Center Event on the map, etc...)</p> <p>After selecting the specific action, remaining form fields (Description, URL, Icon) are automatically populated accordingly</p>

Domain	Feature												
	<div><div>Notification Configuration</div><table><tr><th>Situations</th><th>Sub Situations</th><th>Type</th><th></th></tr><tr><td>Event</td><td>New Event</td><td>GUI</td><td>3 - High</td></tr><tr><td>Event</td><td>Modify Event</td><td>GUI</td><td>3 - High</td></tr></table><div>New Template<div><div>General</div><div>Structure</div><div>Actions<div><div>Action</div><div><div>Name:</div><div><div>Event Details</div><div>CenterOnTheMap</div><div>Merge Event</div><div>Accept change lock user</div><div>Reject change lock user</div></div><div>Description:</div><div></div><div>URL:</div><div></div><div>Icon:</div><div><input type="checkbox"/></div><div>Action</div><div><div>Name:</div><div>CenterOnTheMap</div><div>Description:</div><div>Center on the Map</div><div>URL:</div><div>{{LOCATION_X_1}}{{LOCATION_Y_1}}{{OBJECTID}}</div><div>Icon:</div><div><input type="checkbox"/></div></div></div><div>Recipients</div><div>Escalation and Reminder</div></div></div></div><div>Up to 3 actions maximum can be added for 1 notification; “+/-” buttons in the accordion toolbar, allows the user to add/remove action records.</div><div><div>New Template<div><div>General</div><div>Structure</div><div>Actions<div><div>Action</div><div><div>Name:</div><div>CenterOnTheMap</div><div>Description:</div><div>Center on the Map</div><div>URL:</div><div>{{LOCATION_X_1}}{{LOCATION_Y_1}}{{OBJECTID}}</div><div>Icon:</div><div></div><div>Action</div><div><div>Name:</div><div>CenterOnTheMap</div><div>Description:</div><div>Center on the Map</div><div>URL:</div><div>{{LOCATION_X_1}}{{LOCATION_Y_1}}{{OBJECTID}}</div><div>Icon:</div><div><input type="checkbox"/></div></div></div><div>Recipients</div><div>Escalation and Reminder</div></div></div></div></div></div></div></div>	Situations	Sub Situations	Type		Event	New Event	GUI	3 - High	Event	Modify Event	GUI	3 - High

Event	Modify Event	GUI	3 - High										
Notification Configurator	<div><div>New:</div><div>(New application) – For the user that is configuring a new system notification, in the Notification Configurator – Recipient section - has been added the possibility to select</div></div>												

Domain	Feature
	<p>the users associated to the operational Area interested by notification, by checking a simple flag in the Users list.</p> <p>Single Users and Groups can be added to the notification Recipients 'list in the same way.</p> 
Notification Configurator	<p>New:</p> <p>(New application) – For the user that is configuring a new system notification, in the Notification Configurator – Escalation and Reminder section, the user is able to specify the following:</p> <ul style="list-style-type: none"> - acknowledge rules (ack by all recipients/ack not needed/ack by at least 1 recipient) - Number of reminders (1-10)** - Reminders frequency (min) - Escalation Notification Header (text) - Escalation Priority - Escalation Notification Recipients

Domain	Feature
	 <p>** In the “Escalation notification” section it is possible to specify the rules that will manage also notification popup when the max amount of reminders has been reached. This happen when the user does not acknowledge previous notification received and get many reminders from the system.</p> <p>The Escalation notification is represented by a popup <u>having medium priority</u> (that can be closed manually by operator), and it will be displayed in the Notification widget as always. The notification for escalation will be sent to the specified user in the tab "escalation recipient".</p>

3.2 Fixed
